

Protect your Family from Mumps

1. What is mumps?

Mumps is a contagious disease caused by a virus. It spreads easily through coughing and sneezing.

2. What are the symptoms?

People with mumps will get symptoms about 16-25 days after exposure to the disease. Symptoms include:

- Swollen glands under the ears or jaw (parotitis)
- Fever
- Muscle aches
- Tiredness
- Loss of appetite
- Headache

Some people who get mumps do not have symptoms. Others may feel sick but will not have swollen glands.

3. How does mumps spread?

Mumps spreads through the saliva or mucus from an infected person who coughs, sneezes, or talks. You can also get it by direct contact with an infected object, such as sharing forks/knives/spoons and drinks.

A person with mumps can spread the disease 2 days before swelling starts until 5 days after swelling begins.

4. How serious is mumps?

Mumps can cause serious problems, including:

- Swelling of the testicles in males who have reached puberty (orchitis)
- Swelling of the ovaries (oophoritis) or breasts (mastitis) in females who have reached puberty
- Swelling of the brain (encephalitis)
- Temporary or permanent deafness
- Swelling of the brain and spinal cord covering (meningitis)

5. Is there treatment for mumps?

There is no specific treatment for mumps. Many people fully recover from mumps within a few weeks.

6. What is the best way to prevent mumps?

The best way to protect against mumps is to be completely vaccinated against mumps. The MMR (measles-mumps-rubella) vaccine is safe and the most effective way to prevent mumps.

Who should get the MMR vaccine?

- Children 12-15 months of age and again at 4-6 years of age
- If not vaccinated, older children and adults not pregnant

People with mumps cannot go back to childcare, school, work or other public places until the 6th day after the swelling began.

In summary, mumps is a contagious disease. The best way to prevent mumps is by getting the MMR vaccine.

Key Takeaway Messages:

- Mumps is a very contagious disease that spreads easily through coughing and sneezing
- Symptoms: swollen glands under ear/jaw
- The best way to prevent measles is to be up-to-date with the MMR vaccine.
- Age appropriate vaccination against mumps is required for enrollment in California childcare institutions and schools.
