

HEALTH OFFICER ORDER FOR THE CONTROL OF COVID-19

Public Health Emergency Isolation Order

Revised Order Issued: November 10, 2021

This Order supersedes the August 26, 2021 Public Health Emergency Isolation Order.

This Order is in effect until rescinded by the Health Officer.

PLEASE READ THIS ENTIRE ORDER CAREFULLY

WHO IS REQUIRED TO FOLLOW THIS HEALTH OFFICER ORDER

All individuals who reside in the Los Angeles County Health Jurisdiction who have been diagnosed with COVID-19 are required to isolate themselves and follow all instructions in this Order. A person is considered to be diagnosed with COVID-19 based on one or both of the following criteria:

- a) They received a positive viral test for COVID-19 and/or
- b) A healthcare provider clinically suspects that they have COVID-19

WHAT YOU ARE REQUIRED TO DO IF YOU HAVE COVID-19

To prevent the spread of COVID-19, the County of Los Angeles Health Officer (“Health Officer”) hereby requires you to immediately:

- a) Self-isolate and
- b) Tell your close contacts that they have been exposed and need to follow the [Instructions for Close Contacts to COVID-19](#) (if you have a positive viral test for COVID-19) and
- c) Contact the Los Angeles County Department of Public Health (“Public Health”) at (833) 540-0473 within 24 hours of receiving this Order, unless you have already completed a [contact tracing interview](#) and
- d) Follow all instructions in this Order.

INSTRUCTIONS

1. Self-Isolate Until You’re Not at Risk for Spreading COVID-19 to Others

You must isolate yourself (stay in your home or another residence and away from others) until you are no longer at risk for spreading COVID-19 (see “Duration of Self-Isolation” below). Until that time, you may not leave your place of isolation, except to receive necessary medical care.

You are required to self-isolate because you can spread COVID-19 to others. If you have a positive test, and have not done so already, consider contacting your healthcare provider, clinician advice-line, or telemedicine provider for a medical assessment.

Self-Isolation Instructions: While you are isolating, you are required to follow the Home Isolation Instructions for People with COVID-19 Infection which are available in English, Spanish, and other languages at <http://ph.lacounty.gov/covidisolation>.

Duration of Self-Isolation:

- a) If you tested positive for COVID-19 and have symptoms, you must isolate yourself until:
 - At least 10 days have passed since your symptoms first appeared and
 - At least 24 hours have passed since you have been fever-free without the use of fever reducing medications and
 - Your symptoms have improved.

b) If you tested positive for COVID-19, but never had any symptoms, you must isolate yourself for 10 days after the date that your first positive diagnostic (viral) test was taken. *However, if you develop symptoms while you are isolated*, you must follow the instructions listed above, in *Section (a)*, for individuals with COVID-19 symptoms who test positive.

c) If a healthcare provider informs you that they clinically suspect you have COVID-19, you must remain in isolation until either:

- At least 10 days have passed since your symptoms first appeared and
- At least 24 hours have passed since you have been fever-free without the use of fever reducing medications and
- Your symptoms have improved.

1

OR

- The healthcare provider reassesses your diagnosis and concludes that you do not have COVID-19 and
- At least 24 hours have passed since you have been fever-free without using fever reducing medications.

2

Note: If you are a close contact to a person with COVID-19 and your symptoms developed within 14 days of your last contact, you remain under the Public Health [Emergency Quarantine Order](#). You must follow the “[If you develop symptoms](#)” instructions in the Instructions for Close Contacts to COVID-19, available at <http://ph.lacounty.gov/covidquarantine>, to see when you can stop isolating.

2. Tell Your Close Contacts That They Have Been Exposed and Need to Follow Quarantine Instructions

If you have a positive viral test result, you must notify all of your close contacts, as defined below, that they have been exposed to COVID-19 and that they must follow the Instructions for Close Contacts to COVID-19, which are available in English, Spanish, and other languages at <http://ph.lacounty.gov/covidquarantine>.

Definition of Close Contact: For purposes of this Order, “close contact” is defined as any of the following people who were exposed to you while you were infectious:*

- A person who was within 6 feet of you for a total of 15 minutes or more over a 24-hour period, or
- A person who had unprotected contact with your body fluids and/or secretions, for example, were coughed or sneezed on, shared utensils or saliva, or provided care without using appropriate protective equipment.

* You are considered to be infectious from 2 days before your symptoms first appeared until the time you are no longer required to be isolated (as described in “Duration of Self Isolation” above). If you have a positive COVID-19 diagnostic (viral) test, but no symptoms, you are considered to be infectious from 2 days before your first positive test was taken until 10 days after that test was taken.

3. Contact Public Health within 24 Hours of Receiving this Order to Complete a Contact Tracing Interview

If you have not yet been interviewed by Public Health about your current COVID-19 diagnosis, you are required to call (833) 540-0473 within 24 hours of receiving this Order to complete a confidential [contact tracing interview](#). During the call, you’ll receive information about available services, have a chance to ask questions, and be asked to answer simple questions such as what places you have been to and who you have been around while you were infectious. The people you tell the Public Health Specialist about will be contacted and asked to stay home to help prevent others from getting sick but won’t be given your name or contact information.

PURPOSE OF THE ORDER

The purpose of this Order is to help slow the spread of COVID-19, to protect individuals at higher risk, and to protect the health care system from a surge of cases into its emergency rooms and hospitals. The virus can easily spread between people who are in close contact with one another, especially if they are not fully vaccinated.

People who are not vaccinated against COVID-19 are at the highest risk of getting infected with COVID-19. Unvaccinated older adults and unvaccinated people who have [certain medical conditions](#) are at highest risk of severe illness from COVID-19 disease. People with [weakened immune systems](#) who are fully vaccinated might not respond as well to the vaccine so they may also be at risk for getting very sick. Fully vaccinated persons are at lowest risk of getting infected and are well protected from getting very sick and dying from COVID-19. A small percent of fully vaccinated persons do get infected. Importantly, these post-vaccination infections usually cause only mild symptoms, if any. However, it is still possible for fully vaccinated people to spread the virus to other people.

This Order is based upon scientific evidence and best practices, as currently known and available. Isolation and quarantine are recommended by the Centers for Disease Control and Prevention (CDC) and other public health experts as a proven strategy for preventing transmission of COVID-19.

LEGAL AUTHORITY

This County of Los Angeles Health Officer Order is made under the authority of California Health and Safety Code Sections 101040, 101085, 120175, 120215, 120220, and 120225. The Health Officer may take additional action(s), which may include civil detention or requiring one to stay at a health facility or other location, to protect the public's health if an individual who is subject to this Order violates or fails to comply with this Order.
