

FACTS ABOUT DELTA-8 THC

What is delta-8 THC?

Delta-8 THC (delta-8-tetrahydrocannabinol [THC]) is a naturally occurring chemical compound called a cannabinoid that is found in small traces in the cannabis plant.

50%–75% psychoactive

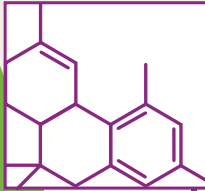

Delta-8 THC is estimated to be about 50%–75% as psychoactive as delta-9-THC, which is the compound that gives you the “high.”

Typically, delta-8 THC is manufactured through a chemical extraction process from hemp-derived CBD. Hemp and marijuana are essentially the same; the only difference is the amount of THC they contain.

The sale of any Hemp products intended for human consumption that contain any detectable amount of THC is prohibited in California.

BUYER BEWARE!

Delta-8 THC in **hemp products (food, beverages, and dietary products)** is not legal in California.

Delta-8 THC comes from a psychoactive compound found in hemp.

Delta-8 THC can be chemically made in a lab or at home.
