

# SAPC Prevention Updates

Los Angeles Department of Public Health  
Substance Abuse Prevention and Control

March 25, 2021

# Welcome!

# School Re-Openings: Red-Tier

- COVID-19 cases have stabilized
- Vaccines offered to school staff
- Schools are able to offer in-person learning for students, with strict adherence to safety protocols

# Prevention Contracts: Updates

- Contract Extensions
- RSFQ and WOS Updates
- Q&A

# SAPC Director Updates

- Interface between Prevention & Treatment
- COVID-19 Situational Update, Vaccines
- Meth Task Force
- Harm Reduction and SB 57

# Bridge Between Prevention and Treatment = Engagement

## Engagement = Opportunity

### Prevention

- Primary
  - Secondary
  - Tertiary
- 
- School-based
  - Community-based
  - Public messaging and education

### Engagement Services

#### At-Risk Populations

ASAM 1.0-AR = ASAM 0.5 with  
DMC-ODS Waiver Renewal

#### Pre-Contemplative Populations

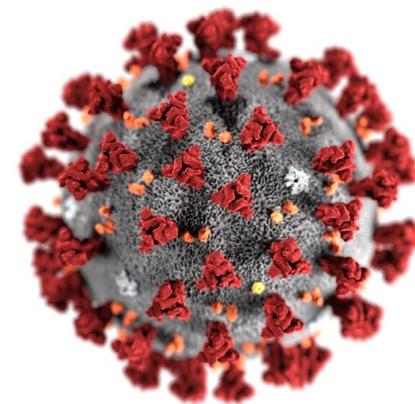

Harm Reduction Services

### Treatment

- Recovery Services
- Outpatient treatment
- Opioid Treatment Programs
- Residential treatment
- Inpatient treatment
- Withdrawal Management
- Case Management
- Etc.

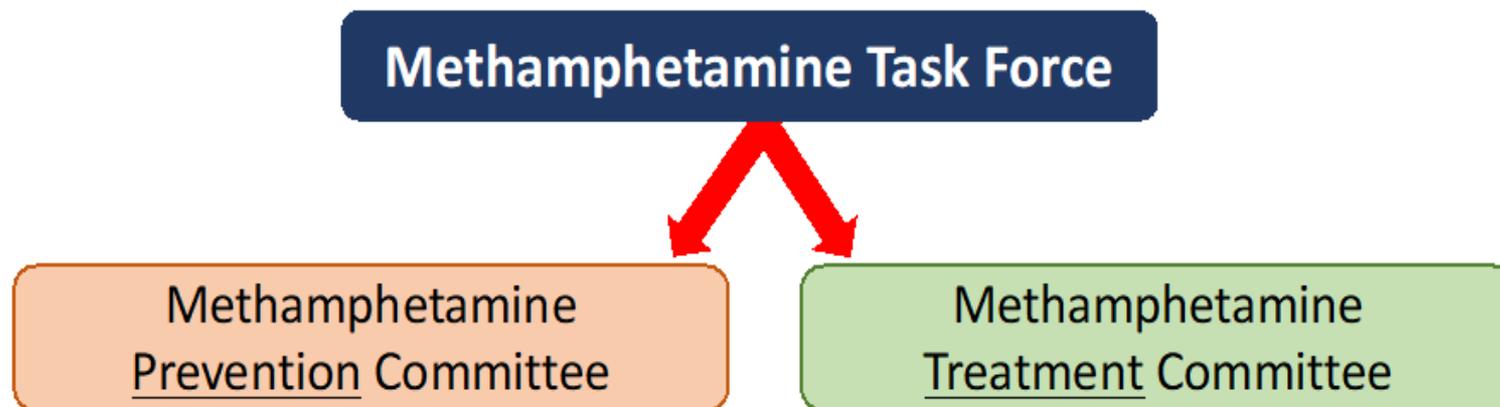

# COVID-19 Situational Updates

- COVID-19 cases have stabilized; reduced community transmission.
- Vaccine
  - Substance Use Prevention and Treatment Staff → Should have already received vaccines due to being a prioritized population
  - As of mid-March, behavioral health (SUD and MH) clients are also prioritized populations in vaccinations due to increased risks for severe illness or death from COVID-19 infections.
- Transmission precautions still needed

# Meth Task Force

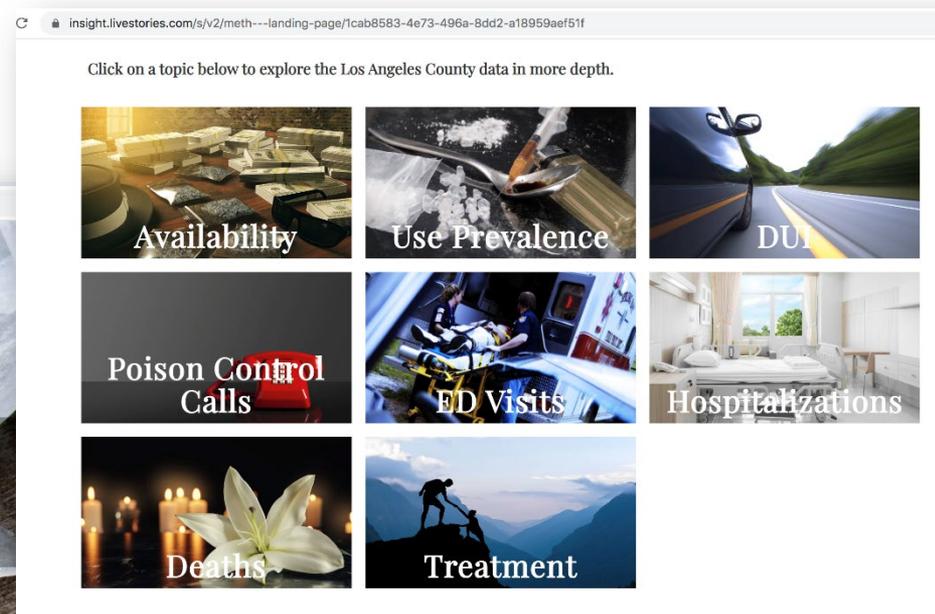

- **DPH-SAPC is convening a Meth Task Force to inform prevention and treatment strategies and address both the upstream and downstream drivers of meth use and abuse.**
  - Comprised of SAPC leads, substance use prevention and treatment providers, health and mental health providers, homeless and housing providers, first responders, and other pertinent stakeholders.

# Meth Data Dashboard

- Developed by SAPC to provide data-driven approach to its meth prevention and treatment strategy.
- Website accessible to all at: <https://insight.livestories.com/s/v2/meth---landing-page/1cab8583-4e73-496a-8dd2-a18959aef51f> (available from SAPC website in “Data Reports and Briefs” section)

- Provides most recent data collected relevant to LAC.
- Contains meth data related to accessibility, DUI, ED visits, Hospitalizations, Poison Control, Deaths, and Treatment.

# Harm Reduction and SB 57

- Broadening our tent to increase the penetration rates of those who need and access substance use services.
- Harm reduction helps us transcend the shame that is often attached to drug use and allows us to engage perhaps the most important group of individuals we need to engage in the substance use field – those who aren't yet ready for treatment.
- SB 57 (Senator Weiner)
  - If passed, authorizes safe consumption site (SCS) pilots in LA, SF, and Oakland.
  - Evidence for SCS
    - Reduced overdoses and mortality
    - Reduced morbidity (communicable disease transmission such as HIV and hepatitis, reduced injection-related infections, etc)
    - Increased access to health and social services
    - Reduced public injections and enhanced safe disposal of syringes

**Harm Reduction = Engagement**

# Thank You!

**“The opposite of addiction is not sobriety; the opposite of addiction is **connection.**”**

*- Johann Hari*

# Methamphetamine: Evidence-Based Strategies

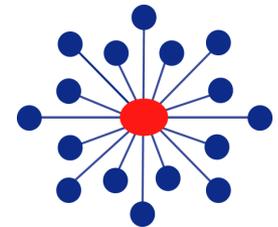

March 25, 2021

## Steven Shoptaw PhD

Director, UCLA Dept Fam Med: Center for Behavioral and Addiction Medicine

Director, UCLA CHIPTS P30MH058107

MPI, Big South/West Node, NIDA CCTN  
UG1DA020024

# Objectives

- Understand the epidemiology of stimulant use disorder, globally and in endemic areas
- Understand cultural links with methamphetamine use
- Review evidence for advancements in pharmacotherapies and behavioral therapies that can be brought into practice
  - A road map that offers hope for the near future

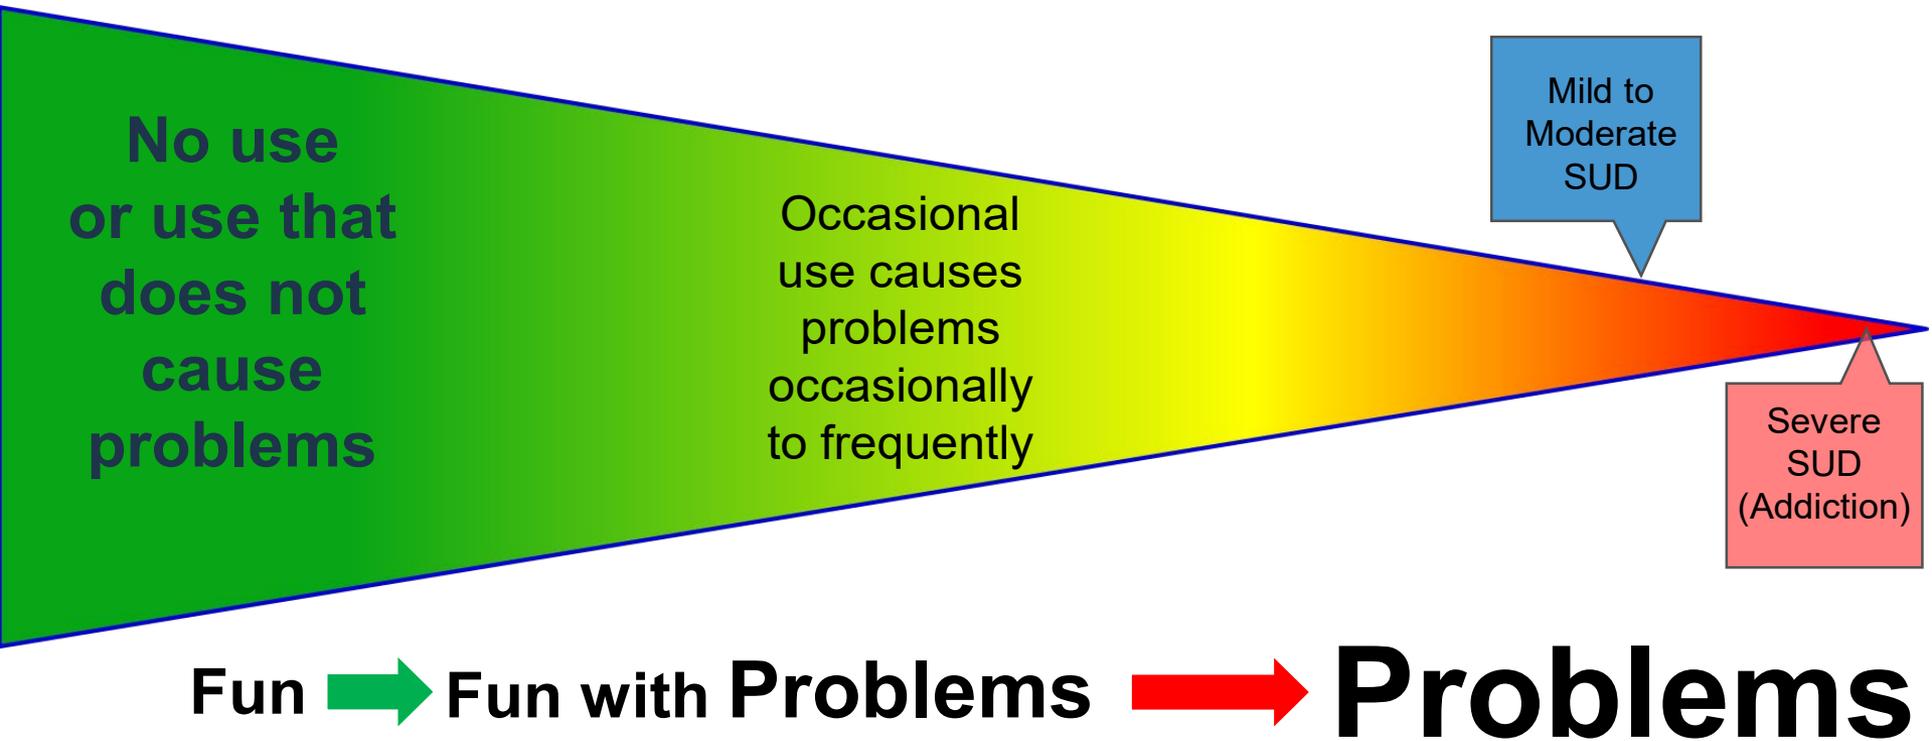

# Addiction: Definitional Constructs

# DSM-5 Definition: Stimulant Use Disorder

Maladaptive pattern of use, *clinically significant impairment or distress* and 2+ of the following in the same 12-month period:

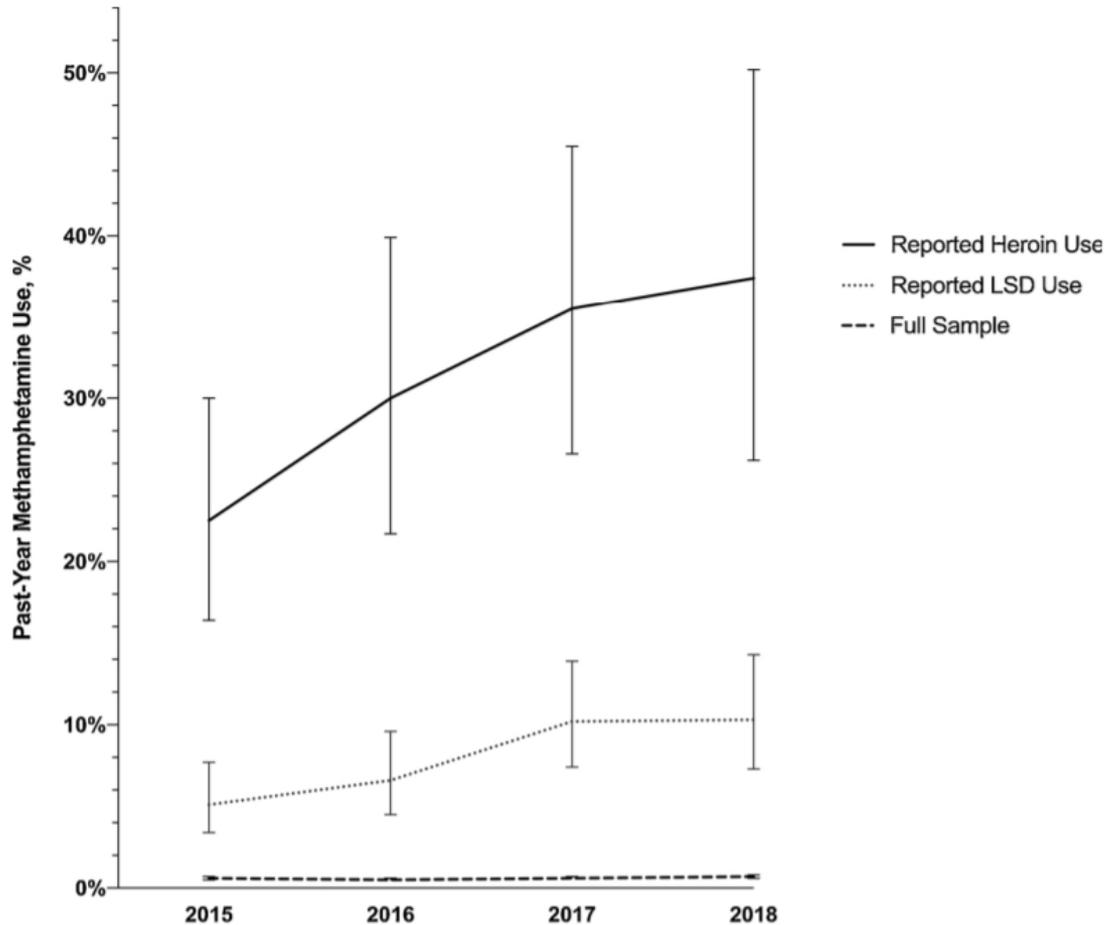

1. Tolerance
2. Withdrawal
3. Used for longer periods than intended
4. Can't cut down or quit
5. Time spent getting, using or recovering
6. Give up social, work or fun activities
7. Craving or a strong desire or urge to use a substance
8. Continued use despite knowledge of negative consequences
9. Failure to fulfill major role obligations
10. Use in physically hazardous situations
11. Continued use despite social and interpersonal problems

# Definitions of a Spectrum: Stimulant Use to Stimulant Use Disorder, Mild to Moderate to Severe

# Current Epidemiology

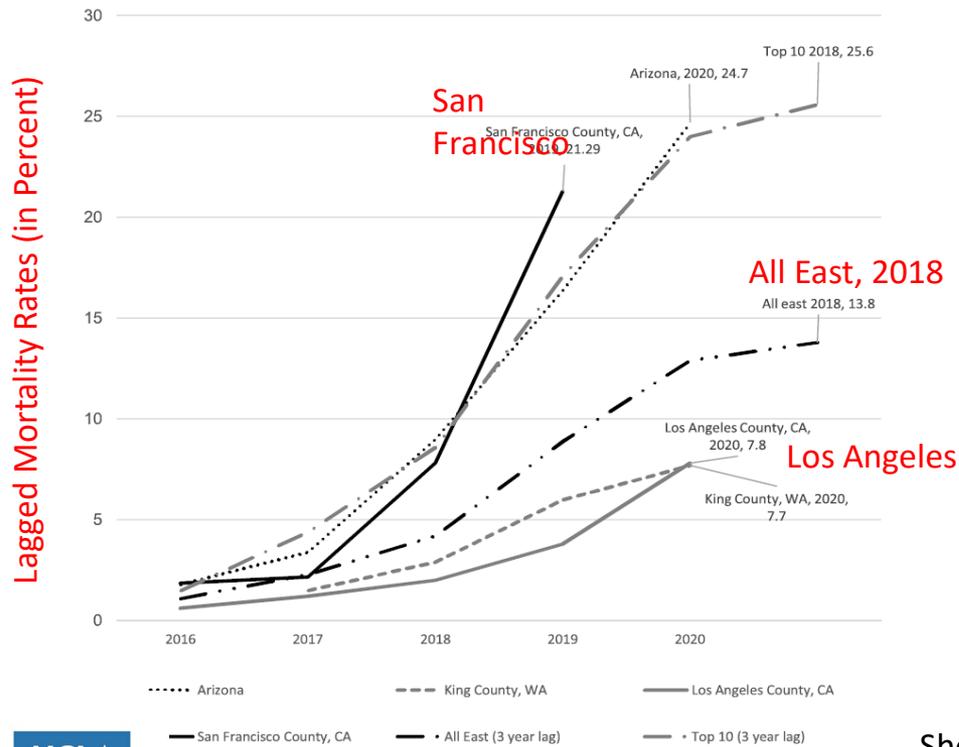

# NSDUH, Methamphetamine U.S.

- General population estimates remain low (0.7%)
- Dramatic rises in meth use among people who report using heroin and LSD

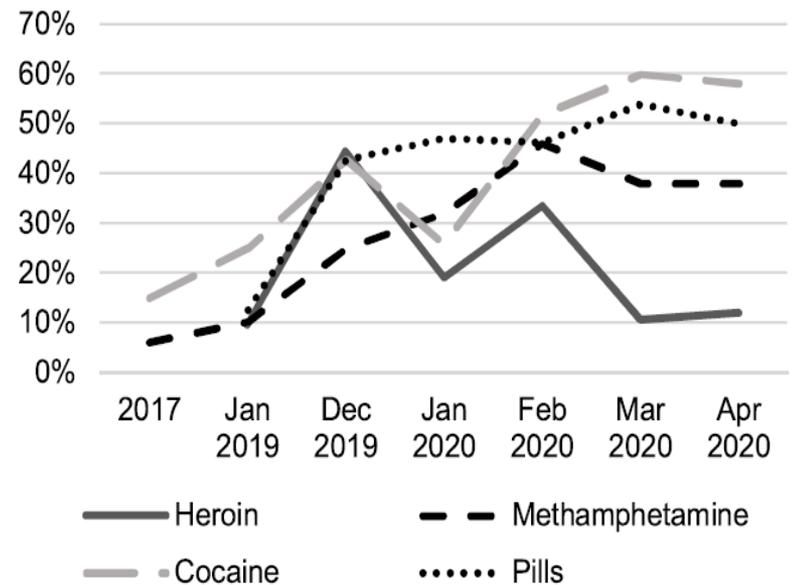

Palamar JJ. *Drug Alc Dep.* 2020 Jun 3;213:108089

# Fentanyl Overdose Deaths 2016-2020

## Overdose Deaths – Fentanyl Plus ...

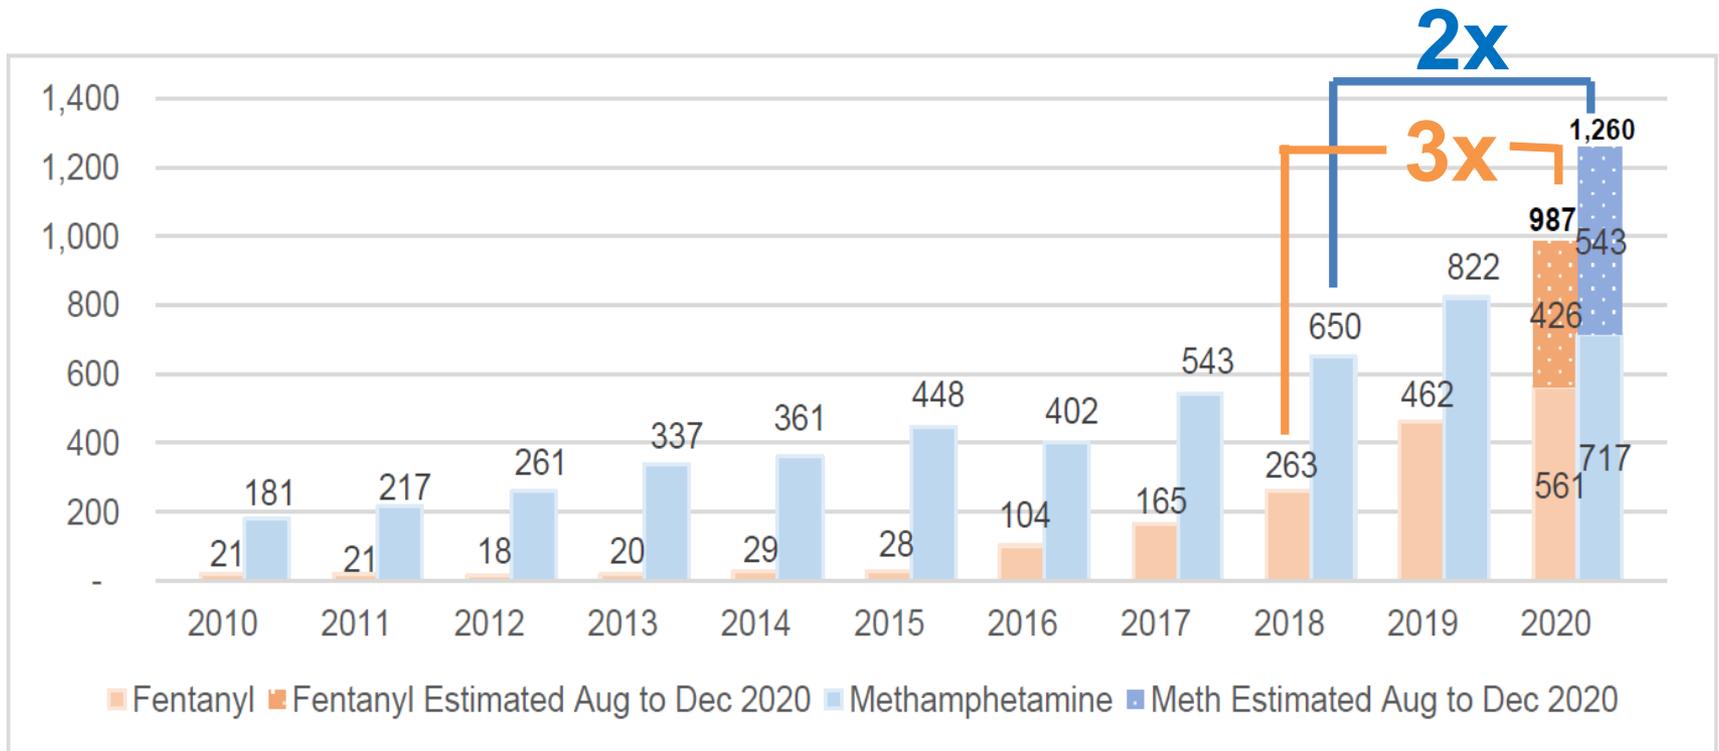

### Los Angeles County, CA

Shover CL et al., doi: 10.1016/j.drugalcdep.2020.108314.

# Fentanyl and Methamphetamine in Los Angeles

Figure 4. Number of Fentanyl and Methamphetamine Overdose Deaths by Year, 2010-2020

**Note:** Predicted values for fentanyl (n=426) and methamphetamine (n=543) from August to December 2020 (dotted bar graph) were added to project full year drug overdose deaths in 2020 to allow for comparisons with other years.

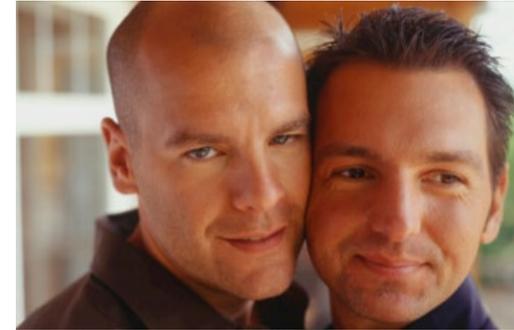

Accidental Drug Overdose Deaths in Los Angeles County Before and During the COVID-19 Pandemic. Health Outcomes and Data Analytics Unit, Substance Abuse Prevention and Control, Los Angeles County Department of Public Health, January 2021

# Culture and Comorbidities

# Methamphetamine: Effects and Function

| Physical |                | Psychological |               |
|----------|----------------|---------------|---------------|
| ↑        | Heart Rate     | ↑             | Confidence    |
| ↑        | Blood Pressure | ↑             | Alertness     |
| ↑        | Pupil Size     | ↑             | Mood          |
| ↑        | Respiration    | ↑             | Sex Drive     |
| ↑        | Sensory Acuity | ↑             | Talkativeness |

Substance Use by HIV-Status (Self-Reported)

## Speed kills: Associations between methamphetamine use, HIV infection, tobacco use, and accelerated mortality among gay and bisexual men in Los Angeles, CA 20years after methamphetamine dependence treatment

R. Colby Passaro<sup>a,b,\*</sup>, Keenan Ramsey<sup>c,d</sup>, Eddy R. Segura<sup>b,e</sup>, Jordan E. Lake<sup>b,f</sup>, Cathy J. Reback<sup>g,h</sup>, Jesse L. Clark<sup>b,g</sup>, Steve Shoptaw<sup>b,c,g</sup>

| Risk Group                                  | Mortality Rate    |
|---|-------------------|
| <b>10-Year Standardized Mortality Ratio</b> |                   |
| GBM + Meth                                  | 3.95 (2.89-5.01)  |
| <b>20-Year Standardized Mortality Ratio</b> |                   |
| GBM + Meth                                  | 3.39 (2.49-4.09)  |
| <b>10-Year Crude Mortality Rate</b>         |                   |
| GBM + Meth                                  | 2.3 per 1,000 PY  |
| GBM + Meth + HIV                            | 5.2 per 1,000 PY  |
| <b>20-Year Crude Mortality Rate</b>         |                   |
| GBM + Meth + HIV                            | 3.4 per 1,000 PY  |
| GBM + Meth + HIV + Tobacco use              | 16.9 per 1,000 PY |

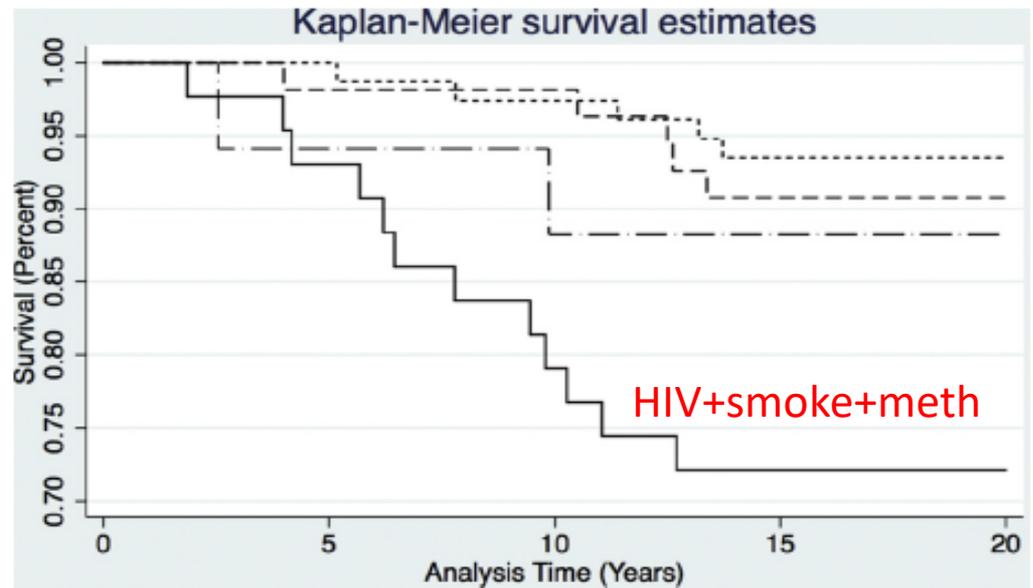

Fig. 2. Kaplan-Meier (K-M) Survival Curves for GBM Treated for Methamphetamine Dependence in Los Angeles, CA between 1998-2000, stratified by HIV status and Tobacco Use; N = 191.

Short-dashed line = HIV infection, but no tobacco use; Dashed line = No HIV infection or tobacco use; Dash-dot line = Tobacco use, but no HIV infection; Solid line = Concomitant HIV infection and tobacco use.

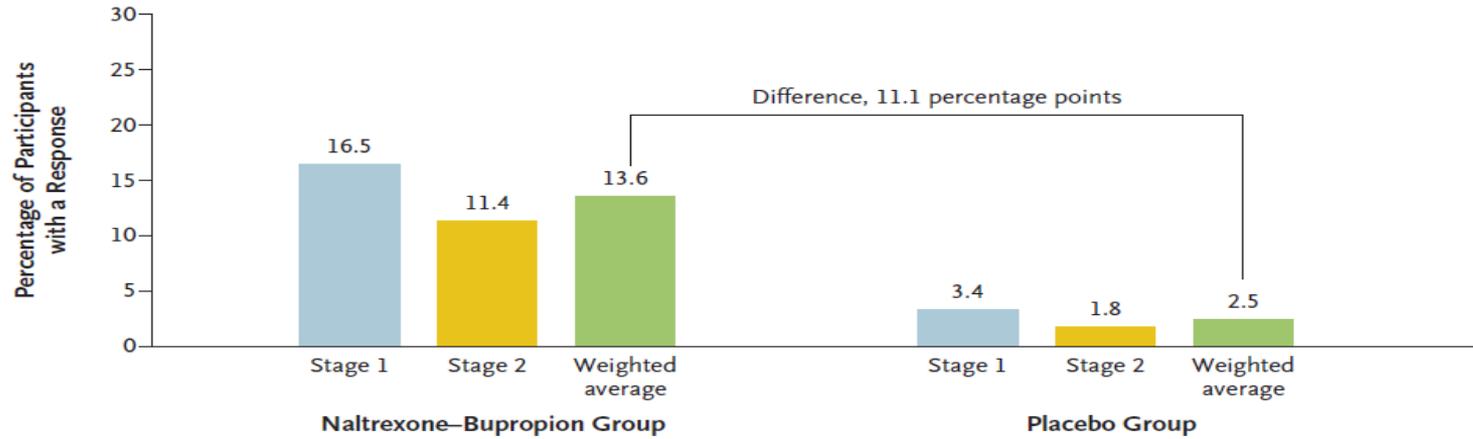

## Summary Culture and Comorbidities

- Methamphetamine has unique, functional purposes in subgroups of regular users, but addiction is the same
- Among MSM, there is measurable and significant benefit to social determinants of health and some STIs related lower levels of reported frequency of methamphetamine use (proxy for dose)
- Smoking is bad for everyone, but especially for meth-using MSM living with HIV

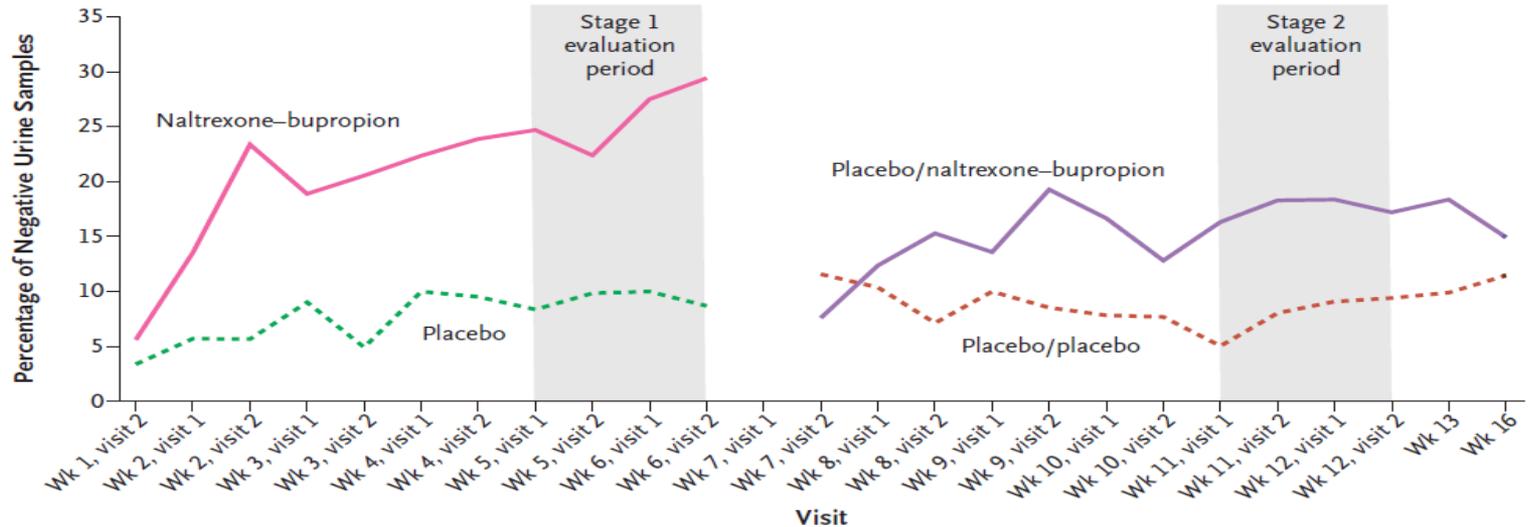

# Pharmacotherapies

# Broadly Effective Medication for Meth Use Disorder

## A Responses

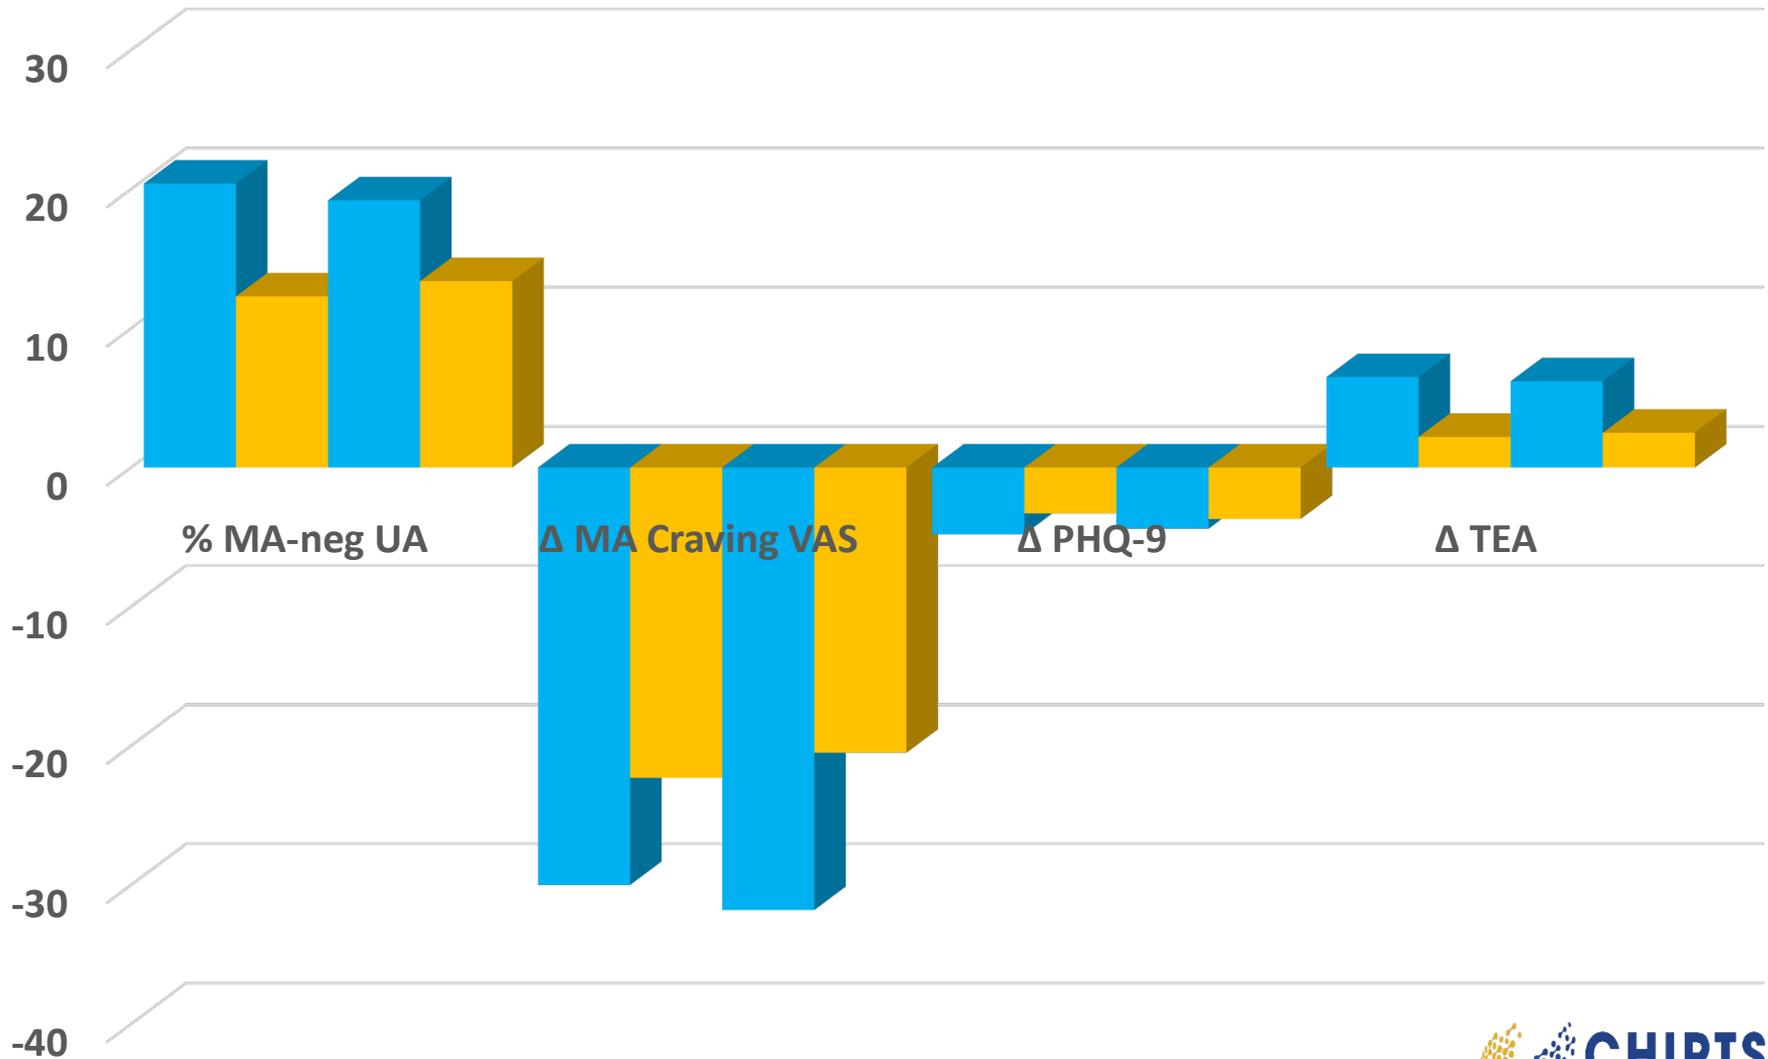

## B Methamphetamine-Negative Urine Samples

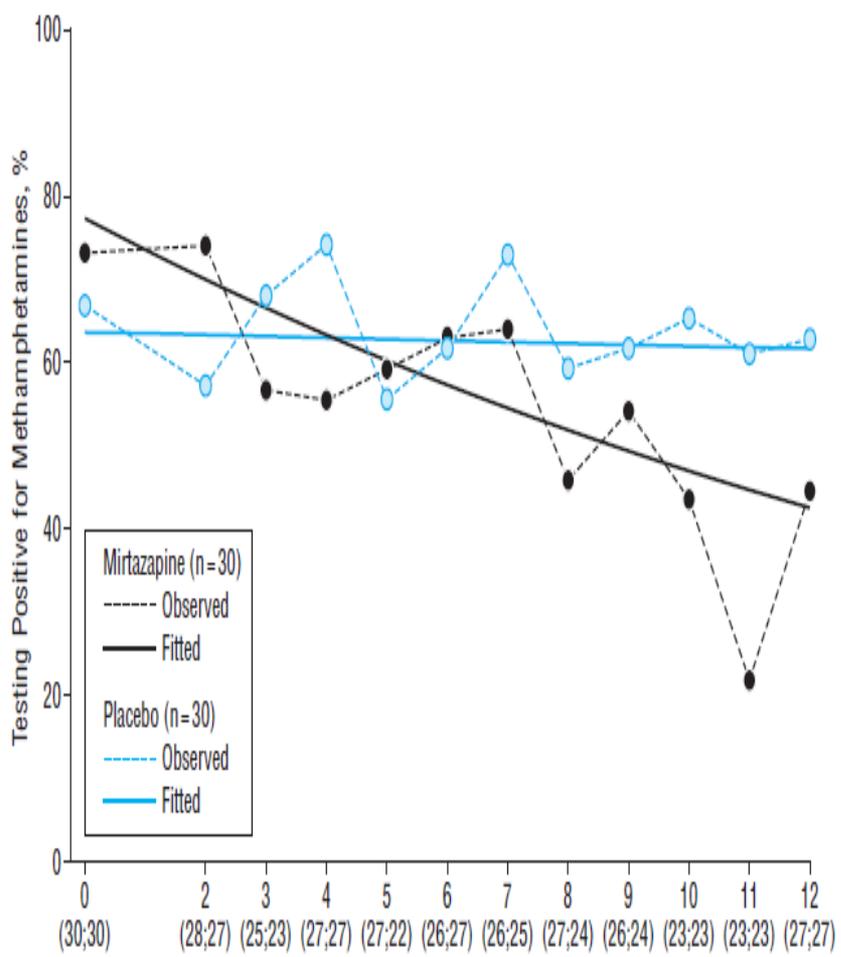

# Secondary Outcomes

- Stage 1 XR-NTX+Bup (N=109) ■ Stage 1 Placebo (N=294)
- Stage 2 XR-NTX+Bup (N=114) ■ Stage 2 Placebo (N=111)

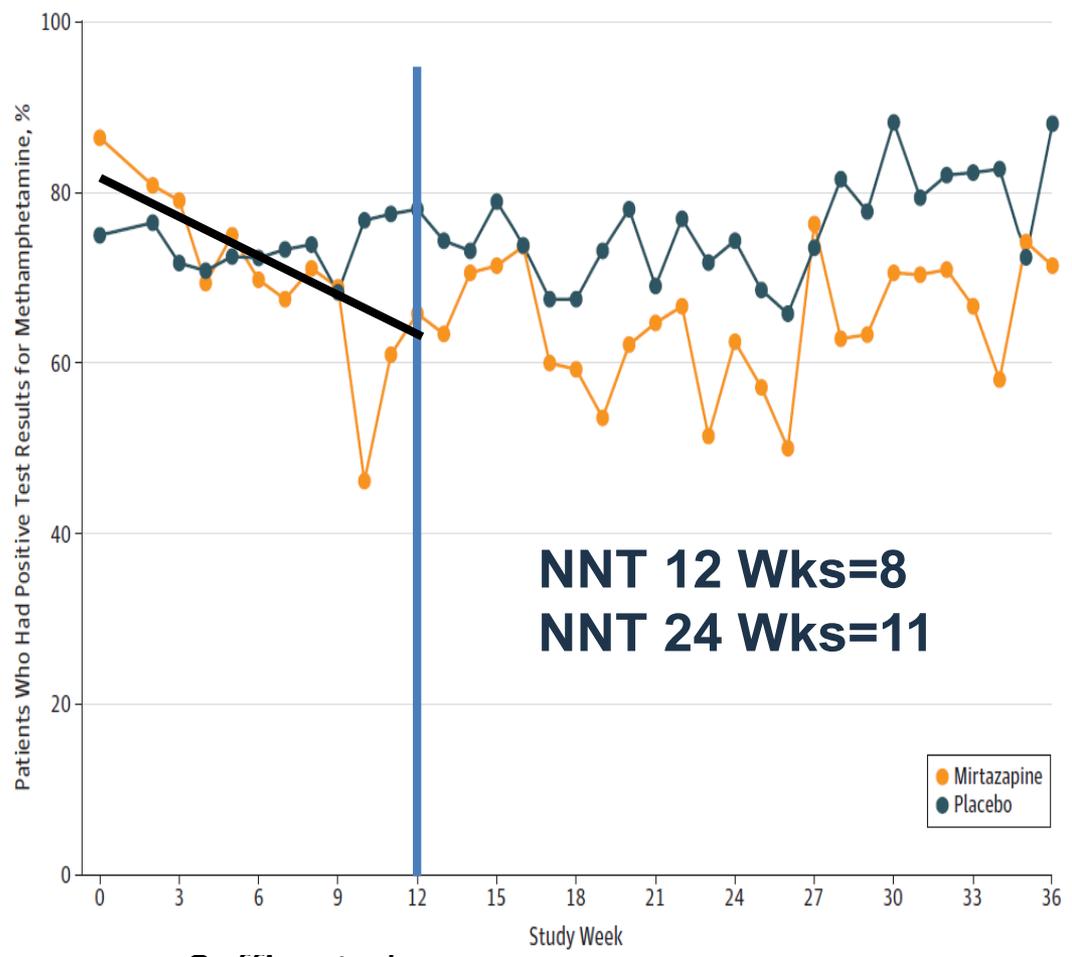

Trivedi MH et al., N Engl J Med. 2021 Jan 14;384(2):140-153.

# Pharmacotherapy for Stimulant Use in MSM: Mirtazapine 30 mg/day

Study Week (No. of Placebo Arm; Mirtazapine Arm Samples)

Colfax et al. *Archives Gen Psych*, 2011. 68(11): 1168-1175

**NNT 12 Wks=8**  
**NNT 24 Wks=11**

Coffin et al.,  
doi:10.1001/jamapsychiatry.2019.3655

# Secondary Outcomes

- 30mg Mirtazapine significantly reduces over placebo SDUA sex among men who have sex with men in both trials
- Mirtazapine maintained outcomes over 36 weeks – most reductions occurred in first 12 weeks
- FDA requires interaction safety study between Mirtazapine and methadone at relevant doses of IV methamphetamine prior to broad Phase 3 study

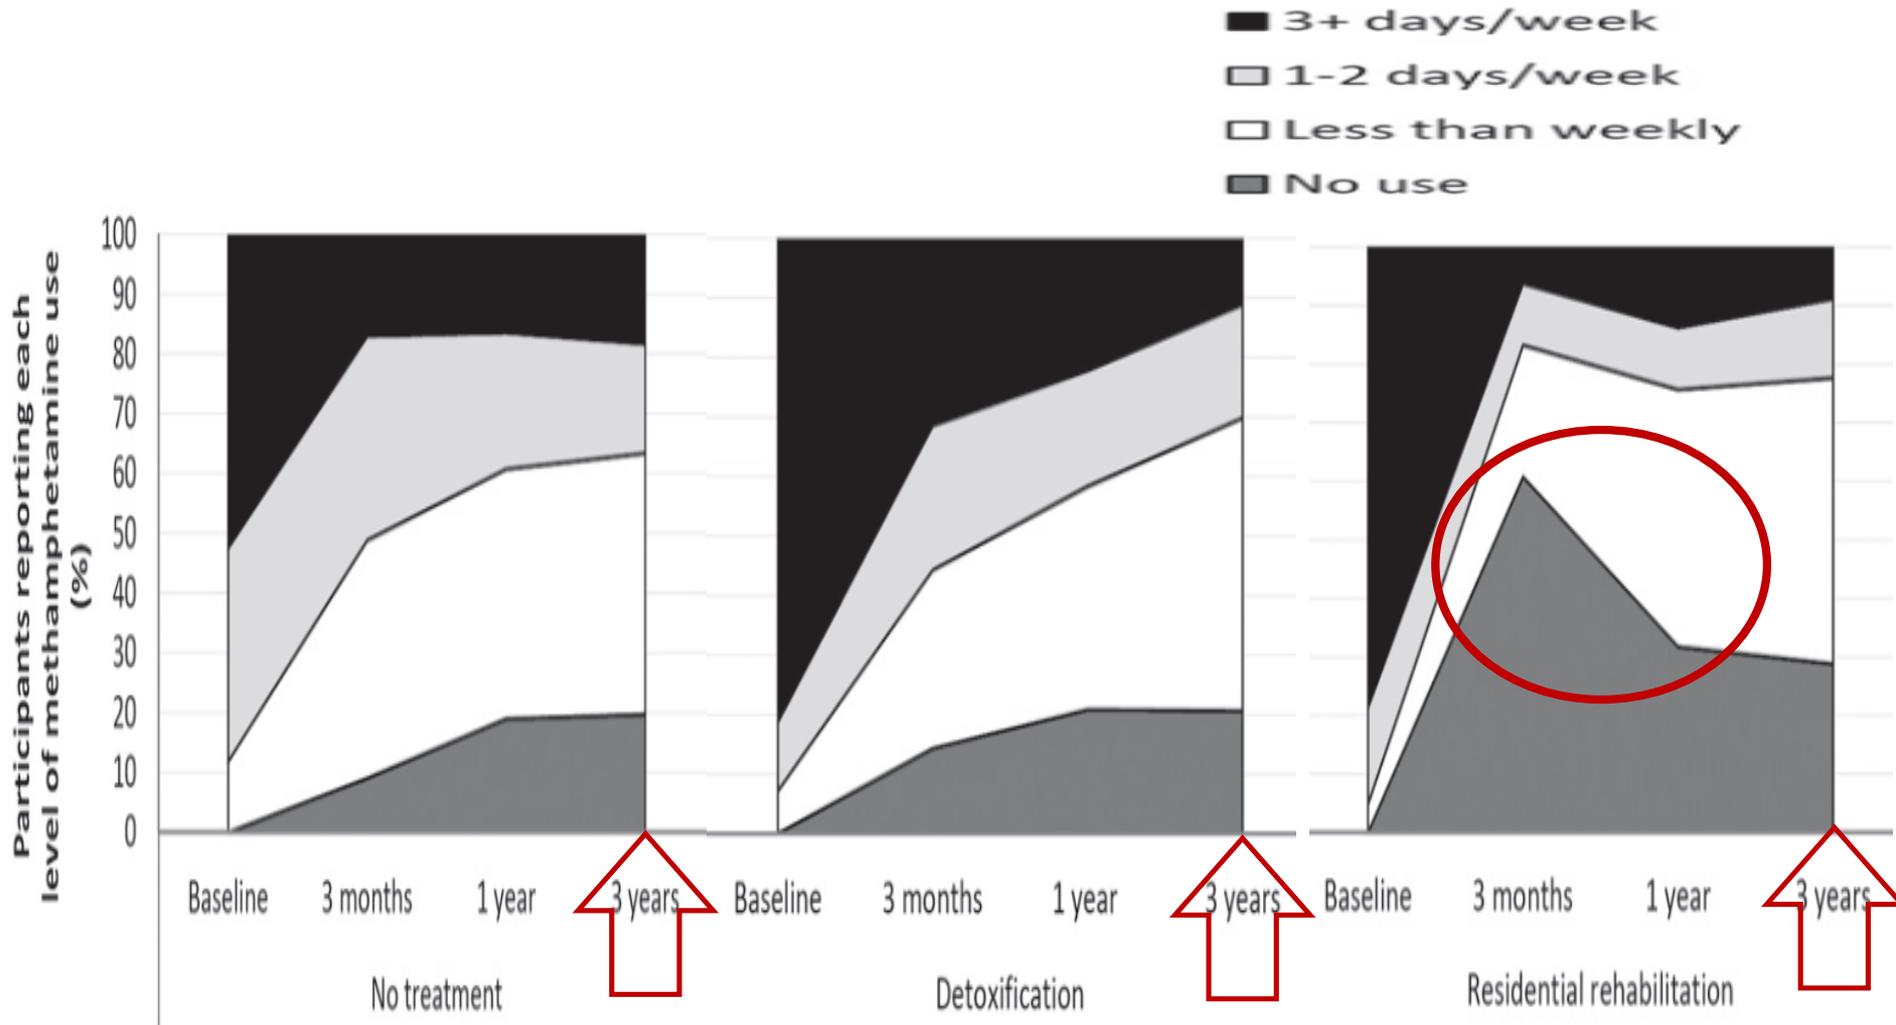

# Rethinking Treatment for Methamphetamine Use Disorder

Two medication approaches have promise:

- Mirtazapine has two trials showing parallel results at 12 weeks
  - Both conducted in San Francisco
  - Both conducted only in MSM
- XR-NTX+Bup has one, fully-powered RCT showing ~19% reduction of methamphetamine use over placebo in the last two weeks of trial periods
  - Cannot be used in persons with moderate to severe opioid use disorder and methamphetamine co-use
- Is it time to consider medication foundation to treating methamphetamine use disorder? Much as for alcohol use disorder?

# Behavior Therapies

# Quasi-experimental Treatment Outcomes - MATES study: Chronic, Relapsing, Effective?

## Fishbowl

- Urine results determine number of draws
- First negative = 3 draws with increases by 1 for each consecutive negative sample to a cap
- Prizes are:
  - 50 “good job”
  - 30 “low prize” (\$1-2)
  - 17 “medium prize” (\$5-10)
  - 3 “big prize” (\$50)

## Vouchers/Cash

| Week    | M/Tu    | Th/F    | Bonus   | Week Total |
|---------|---------|---------|---------|------------|
| Week 1  | \$5.00  | \$7.50  | \$10.00 | \$22.50    |
| Week 2  | \$10.00 | \$12.50 | \$10.00 | \$32.50    |
| Week 3  | \$15.00 | \$17.50 | \$10.00 | \$42.50    |
| Week 4  | \$20.00 | \$22.50 | \$10.00 | \$52.50    |
| Week 5  | \$25.00 | \$27.50 | \$10.00 | \$62.50    |
| Week 6  | \$30.00 | \$30.00 | \$10.00 | \$70.00    |
| Week 7  | \$30.00 | \$30.00 | \$10.00 | \$70.00    |
| Week 8  | \$30.00 | \$30.00 | \$10.00 | \$70.00    |
| Week 9  | \$30.00 | \$30.00 | \$10.00 | \$70.00    |
| Week 10 | \$30.00 | \$30.00 | \$10.00 | \$70.00    |
| Week 11 | \$30.00 | \$30.00 | \$10.00 | \$70.00    |
| Week 12 | \$30.00 | \$30.00 | \$10.00 | \$70.00    |
| Totals  |         |         |         | \$702.50   |

## Key Points

- You get what you pay for – lower limits of CM efficacy ~\$200 (or a \$300 program)
  - Average payout is about 66% of total
- Use a signed contract to explain the program
- No arguments. No tolerance for “emergency”
- Rapid Reset – If a positive or missed sample:
  - Returns to initial value for next negative sample (i.e., \$5);
  - After consecutive negative samples, return to place in schedule continue escalation

## Considerations

- Must achieve first reward; if not, CM won't work
  - People with very heavy meth use have problems
- Sample integrity – strong chain of custody of urine samples required
- Linkages to talk therapy or medications nice, but not required
- Reinforcements (including verbal) are positive; no preachy/teachy.
- Consistent with brain disease for addiction model

# Contingency Management: How Well it Works

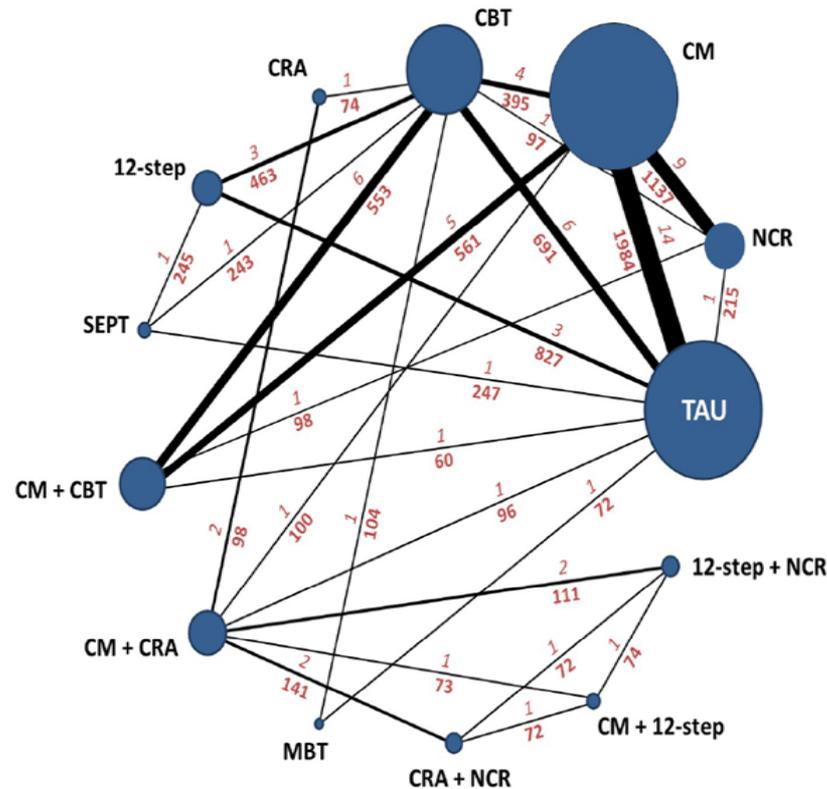

## Meta Analyses of Contingency Management

- $d=0.46$  (Benishek et al., **2014**, *109*:1426-1436) – Prize based only
- $d=0.58$  (Dutra et al., **2008**, *Am J Psychiatry* *165*:179-187)
- $d=0.52$  (Griffith et al., **2000**, *Drug Alc Dep* *58*:55-66)
- $d=0.40$  (Prendergast et al., **2006**, *Addiction* *101*:1546-1560)

**If Contingency Management were a medication  
it would be standard of care**

# Meta-analysis of Behavioral Therapies for Stimulant Use Disorder

A Abstinence

- CM +/- either community reinforcement approach or CBT had superior efficacy and acceptability compared to TAU at 12 weeks and at end of treatment.

<https://doi.org/10.1371/journal.pmed.1002715>

# Motivational Interviewing: Basic Assumptions

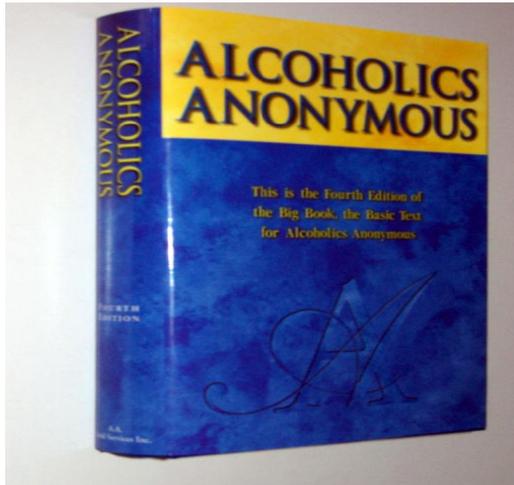

- People change thinking and behavior along a series of stages
- Individuals may enter treatment at different “stages of change”
- The natural change process can be changed using MI techniques
- MI engages individuals in longer term treatment and promotes specific behavior changes
- Confrontation of “denial” is counterproductive and may be harmful

## Meta analysis MI and CM

- Meta-analysis (N = 84) was performed to estimate the pooled effect size of Motivational Interviewing (MI) and contingency management at different follow-up periods.
- CM had a significant effect at 3-month follow-up, only.
- MI had a significant effect at 6-month follow-up, only.
- CM had small and medium effects on multiple substances at 3-month follow-up (i.e., tobacco, marijuana, stimulants, polysubstances), but not at 6-month follow-up.
- MI had 1 significant medium effect at 3-month follow-up (i.e., marijuana), but several significant small effects at 6-month follow-up (i.e., alcohol, tobacco, polysubstances).

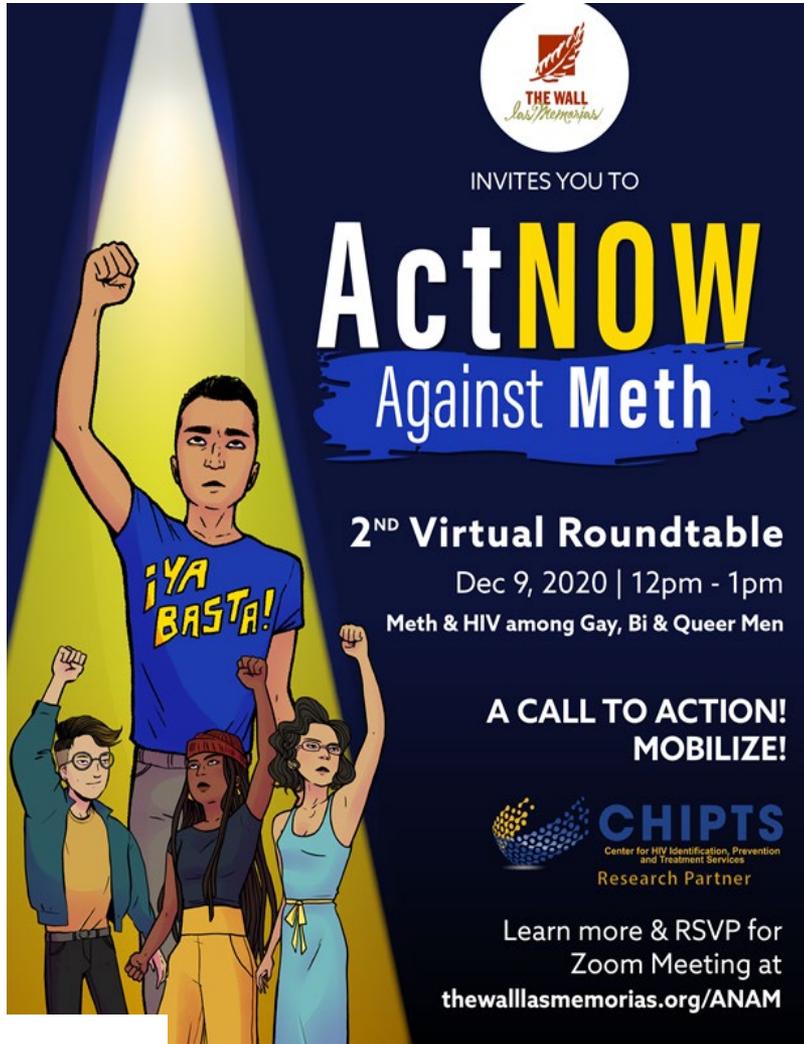

Cayegh CS et al. *Psych. Addict Behav.* 2017. 31:403-414

# Summary on Behavioral Therapies

- Challenge is to get effective treatments into health systems
- Contingency Management – highly efficacious with consistent signal
- Motivational Interviewing – brief sessions
- Cognitive Behavioral Therapy – “teachy” with meetings with therapist over weeks/months
- 12-Steps is an ubiquitous social fellowship

# Prevention: The Missing Piece

  
INVITES YOU TO

# ActNOW

## Against Meth

**2<sup>ND</sup> Virtual Roundtable**  
Dec 9, 2020 | 12pm - 1pm

## YOU CAN COME BACK FROM METH.

SUPPORT. EXPERTISE. LOVE. COURAGE.  
[METHFREELACOUNTY.ORG](http://METHFREELACOUNTY.ORG) | 

### THE STRUGGLE

LA is a land of hope, dreams, opportunities, and ambition -- but it's also a tough place to make it. Save our dreams from the nightmare of meth. We can do it.

### COME BACK

Meth can take you away from your life, family, and friends. But you have the courage to come back. We have support, expertise, and resources to help too.

## DON'T LET METH TAKE OUR CITY OR OUR DREAMS.

[METHFREELACOUNTY.ORG](http://METHFREELACOUNTY.ORG) | 

## Take Homes for Today:

- There are two medications with promising data for methamphetamine use disorder:
  - Fully-powered trial of XR-NTX+bupropion
  - Two small trials of mirtazapine 30 mg in MSM (in San Francisco)
- Evidence now demands rethinking on how to approach treatment:
  - Medication for Methamphetamine Use Disorder?
- Contingency management is most efficacious behavioral therapy
  - Need to scale-up locally
  - Integrate with existing treatments
  - Demand quality improvement
- Need for prevention NOW!

**Thank You!**

Veronica De Lara, Co-Chair of the California Alcohol Policy Alliance

Cassandra Meraz, Member of CAPA LGBTQ+ Caucus

# L.A. DAPA COMMITTEES

## RESEARCH COMMITTEE

### COUNCIL DISTRICT 6

CD6 represents the central and eastern valley side of the city including the neighborhoods of Arleta, Panorama City, Lake Balboa, Van Nuys, Sun Valley, North Hollywood, and North Hills.

While alcohol businesses can be assets contributing to the local economy, communities with a high density of alcohol establishments have higher rates of accidental injuries, drinking and driving, alcohol related traffic crashes, and rates of assault, crime, and violence.

Within CD6, there are 252 total licenses and applications

- 101 on-sale licenses
- 154 off-sale licenses

There are more alcohol outlets in CD6 than there are parks, recreation centers, and libraries. (77)

There are more alcohol outlets in CD6 than there are Starbucks and McDonald's locations. (19)

April 5, 2021  
1 pm - 2:30 pm

## POLICY COMMITTEE

### Restaurant Beverage Program (RBP):

The RBP Ordinance seeks to dramatically shorten the processing time and lower the cost for restaurant owners in the City of Los Angeles to get a local permit to serve alcohol. Currently, it is being framed as a COVID relief and jobs creation package.

### Deemed Approved Ordinance (DAO):

LA DAPA has met several times with the LA City Planning Department to provide input into their proposed Deemed Approved Ordinance, or DAO. The DAO would establish a set of performance standards for alcohol businesses that opened before a CUB was required.

### Neighborhood Empowerment Tool (N.E.T):

NET is a planning and land use tool sponsored by LA DAPA that would protect vulnerable communities from an excessive density of alcohol retailers by allowing the creation of sensitive use zones where no new alcohol businesses would be allowed. NET is being rolled out early – mid in 2021

# California Alcohol Policy Alliance

**BRIAN "SUPERB" OLIVA**

CAPA shall unite diverse organizations and communities in California to protect health and safety, and prevent alcohol-related harm through statewide action.
